**1. Abstract**

Hotel Maintenance & Repair Tracker is a web-based application developed to simplify and organize maintenance management in hotels. In hotels, maintenance issues such as electrical faults, plumbing problems, damaged equipment, and room service complaints are often difficult to track manually, leading to delays and poor communication. This project provides a centralized platform for logging, monitoring, and managing maintenance requests efficiently.

The system allows hotel staff or guests to submit maintenance requests along with issue details and priority levels. Administrators can assign technicians, update request status, record repair costs, and maintain resolution notes. The application also supports notifications, maintenance history tracking, and report export features for better record management.

The project is developed using modern frontend and backend technologies to provide a simple and user-friendly interface. It aims to improve communication between hotel staff and maintenance teams, reduce response time, and ensure timely issue resolution. By digitizing maintenance operations, the system helps hotels improve operational efficiency, maintain service quality, and enhance customer satisfaction.

**2. Module Mapping**

| <b>Module Name</b>                  | <b>Assigned Roll Number(s)</b> | <b>Signature</b> |
|-------------------------------------|--------------------------------|------------------|

| <b>Resolution Notes Module</b>      | <b>2520090234</b>              | <b>Poojitha</b>  |
| <b>History Tracking Module</b>      | <b>2520090234</b>              | <b>Poojitha</b>  |
| <b>Export Module</b>                | <b>2520090234</b>              | <b>Poojitha</b>  |
| <b>Admin Panel Module</b>           | <b>2520090234</b>              | <b>Poojitha</b>  |

### 3. Module Details

M.V.L. SAMHITA(2520030509)

Responsible for developing the Request Form module for submitting maintenance complaints, the Priority Badge module for categorizing request urgency, the Technician Assignment module for allocating tasks to technicians, the Status Update module for tracking maintenance progress, and the Notifications module for providing maintenance alerts and updates to users and administrators.

POOJITHA(2520090234)

Responsible for developing the Cost Input module for recording repair expenses, the Resolution Notes module for storing maintenance solutions and remarks, the History Tracking module for maintaining past maintenance records, the Export module for generating downloadable maintenance reports, and the Admin Panel module for managing users, requests, and overall system activities.

### 4. Frameworks / Platforms / Software Used

#### Frontend

- HTML5
- CSS3
- JavaScript (ES6+)
- React.js
- Bootstrap

#### Backend

- Node.js
- Express.js

#### Database / Storage

- LocalStorage
- MySQL(optional)

#### Tools / Platforms

- VS Code
- GitHub
- Postman (API Testing)
